Artificial Capital

Demand-Engineered Software Studio

FUND I

Disclosures

The information contained in this document is confidential and is intended solely for the person to whom it has been delivered. It is not to be reproduced or distributed to any other person without the prior written consent of Artificial Capital. This document does not constitute an offer to sell or a solicitation of an offer to buy any security. Any such offer would only be made by means of a formal private placement memorandum.

An investment in the fund is speculative and involves a high degree of risk. Opportunities for withdrawal and transferability of interests are restricted, so investors may not have access to capital when it is needed. There is no secondary market for the interests and none is expected to develop. The fees and expenses charged to an investment in the fund may be higher than the fees and expenses of other investment alternatives and may offset profits. Past performance is not indicative of future results.

Team

Nick Nihezagire

Managing Partner

- PwC M&A financial diligence
- Credit underwriting at Investissement Québec
- Evaluated hundreds of SMB financials
- Downside-first capital allocation

Espoir B.

Co-Founder & Operating Partner

- Built multiple ventures from zero
- Product launch and execution
- Operates under capital constraints
- Leads product build and deployment

Raphael Tremblay-Bouchard

Venture Partner

- Founder of Farmzz B2B SaaS
- Product development and GTM strategy
- Experience serving non-technical SMBs
- Focus on niche SaaS markets

A team trusted by world-class organizations

Why This Team Has an Edge

Capital Discipline

- Credit underwriting background
- Downside-first thinking
- Disciplined capital deployment

Product Execution

- Bootstrapped product builders
- Rapid product deployment
- Capital-efficient development

Demand Discovery

- Structured operator interviews
- Creator partnerships
- Presale validation

This combination creates a repeatable system for discovering and monetizing demand.

The New Reality of Software

AI-Assisted Development

MVP build costs range from $15k to $40k. Small, agile teams are now successfully replacing large engineering units.

Speed of Iteration

Products are launched in weeks, not months. Failed ideas are killed quickly, preserving capital.

Fragmented Distribution

Niche communities are replacing mass marketing. Creators are becoming primary distribution channels.

Because code is commoditized, successful software investing is no longer about technology risk—it's entirely about distribution risk.

Traditional Venture vs. New Reality

Traditional Venture

- High capital requirements required
- Growth emphasized before revenue
- Heavy power-law dependency

New Reality

- Software is cheaper than ever
- Faster experimentation is possible
- Smaller lean teams can win

Capital-intensive venture models become inefficient when software becomes cheap.

Our Investment Thesis

Demand Engineering

Identify monetizable niches and validate willingness to pay before building.

Creator Distribution

Leverage trusted audiences for zero-CAC product launches.

Capital Discipline

Run cheap experiments and enact fast shutdowns of failures.

Returns are the by-product of a repeatable demand discovery engine.

The Compounding Trust Thesis

We operate on a core belief: most software products, especially mobile apps, are not built for long-term, compounding revenue. They are ephemeral tools, not enduring platforms. Our model fully embraces this reality.

Every asset we build or acquire is treated as having a finite shelf life—months, not years. This forces a ruthless focus on profitability, rapid execution, and efficient capital deployment. We are not building decade-long roadmaps for individual products.

Our true long-term asset is the trust we build with every single interaction. While the products may be transient, our relationships are permanent. Every customer, partner, and user is an opportunity to communicate our ethos and build the Artificial Capital brand. **This is our real moat.**

Traction: Farmzz

Farmzz is a comprehensive B2B SaaS platform specifically designed for the unique operational needs of modern farming operations, built from the ground up by Venture Partner Raphael Tremblay-Bouchard.

This asset demonstrates our ability to identify specialized, high-demand niches, build exact vertical solutions efficiently, and capture willingness to pay without traditional venture capital.

50+

e
rs

15%

Month-over-month growth

Bootstrapped to Profitability

Built and scaled entirely on customer revenue without external funding dilution.

Active Pipeline

Stage	Opportunity	Vertical	Target Close	Est. Year 1 Rev	Status
Operating & Growth	Farmzz — B2B SaaS platform for modern farming operations. 50+ paying customers. Bootstrapped to profitability.	AgriTech / B2B SaaS	**Live**	**$120k**	**Revenue Generating**
Demand Engineering	Selah — AI-powered bookkeeping built for skilled trades and blue-collar operators.	Fintech / Trades	**Q2 2026**	**$150k**	**Active Build**
Demand Engineering	Alarmy 2.0 — A premium, AI-native alarm and sleep wellness app. Acquisition of Alarmy mobile app under evaluation.	Health / Utilities	**Q3 2026**	**$250k**	**LOI in Progress**
Discovery & Validation	Niche Social Scheduler — A content planning and scheduling tool built specifically for TikTok and short-form creators.	MarTech / Creator	**Q4 2026**	**TBD**	40+ Interviews Run

Pipeline sourced through structured interviews and creator networks.

Validation Before Build

Interviews

15+ operator interviews

Landing Page

2.5% waitlist conversion

Pre-sales

Pre-sale commitments validated

Products only built after validated willingness to pay.

Demand Engineering Studio

Demand Validation

Identify niches, run interviews, and secure hard pre-sales to de-risk demand completely.

Lean Build

Capital-efficient development sprints focusing only on the core monetized features.

Monetized Utility

Launch to committed audience and rapidly scale Monthly Recurring Revenue (MRR).

Reinvest Earnings

Funnel excess cash flow into subsequent experiments or return to LP base.

Portfolio Construction

Fund Structure

- **$1M-$3M** target size
- **8-12** targeted assets
- **3-5** year hold period

Target Allocation

70% — New Builds
30% — Micro-Acquisitions

Risk Management

- Hard validation gates
- Capped capital exposure
- Fast failures prioritized

Small experiments create asymmetric outcomes.

Capital Deployment

Target allocation for the first $1M

Infrastructure Breakdown

- **Legal & Fund Admin:** $100k
- **Marketing & Operations:** $100k
- **Contingency Reserve:** $100k

Capital deployed gradually across 24 months.

Unit Economics per Asset

$25k

Build Cost / Capex

Extremely low upfront risk profile allows rapid deployment and abandonment.

$2k → $15k

Revenue Ramp

Expected MRR scaling within 12-18 months of public product launch.

$5k–$10k

MRR Breakeven

Monthly recurring revenue target per asset to cover operating costs.

"We build for profitability, not just growth. Every asset is designed to be self-sustaining within 3–6 months."

We Expect Failures. The Model Still Wins.

Failures (40%)

Assets that never reach breakeven. Capital capped at $15k per failure.

Break-Evens (40%)

Assets that cover their own costs but do not generate significant returns.

Winners (20%)

Assets that achieve product-market fit and generate 10x+ returns.

"Our model is built on the assumption that most of our experiments will not be massive successes. It works anyway."

Creator Distribution Model

The Creator

Provides Audience Access

Drives Product Feedback

Spearheads Launch Promos

Audience Traffic →

← **10-25% Equity / Rev Share**

The Studio

Executes Product Build

Deploys Fund Capital

Manages Tech Operations

A symbiotic model aligning product building capabilities with embedded distribution networks.

Liquidity Pathways

Cash Yield

- Quarterly capital distributions
- Derived from free cash flow of yielding assets

Asset Sales

- Opportunistic spin-offs
- Target valuation at 4-6x ARR
- Strategic micro-PE buyers

Portfolio Roll-Up

- Full SaaS bundle exit
- Target buyer: Strategic acquirer or major PE firm

Continuation

- Roll winners into Fund II
- Original LPs bought out at standard NAV price

First 24 Months

0-6 Months

- Launch Selah v2.0
- Close AI Bookkeeping beta
- Acquire first micro-SaaS

6-12 Months

- First assets cross $5k MRR
- Complete 2nd creator partnership
- Scale infrastructure efficiency

12-18 Months

- Targeting portfolio breakeven at $40K total MRR
- Liquidate first failed experiments

18-24 Months

- Begin first LP cash distributions
- Evaluate initial asset spin-offs

Fund Terms

2.0%

Management Fee

Assessed annually on committed capital.

20%

Carried Interest

Paid only on distributions above the 8% hurdle.

8%

Preferred Return

Cumulative, non-compounding hurdle rate.

Current Raise

$250k	$1M	$100k	Immediate
First Close	Fund Target	Minimum LP	Deployment
Target: Q3 2026			

Use of Proceeds (First Close)

- Build out 2 new demand-validated assets
- Acquire 1 high-margin micro-SaaS tool
- Fund 12 months of core operations
